

Critical perspectives for city regional economies.

A collection of reports and articles providing critical analyses and alternative frameworks for approaching economic development in city-regional or similar contexts. Other pieces could have been included but I have tried to keep the list manageable in size. I do not agree with the policy stances in all cases (e.g. the notion of “inclusive growth”) but have included these reports due to other valuable aspects not least the data presented. Some pieces are specifically about Manchester while others are about other regions or about localised economies.
